

LATEST ANALYSIS OF B.1.351 VARIANT DATA

Thomas House University of Manchester COVID-19 Modelling Group
JUNIPER Consortium

Report 10 May 2021

Looking at the Figure 1, it seems that only London non-Travel have sustained exponential growth.

Fitting this to data with a breakpoint at the New Year and at the start of the Roadmap, using a piecewise exponential as in the doubling time paper, gives the results in Figure 2. The growth appears to be faster than the SAGE consensus for London, with the latest estimate at an un concerning > 2 month doubling.
